Ivan (Fan Wang)

Front-end Engineer

iwfan@duck.com · iwfan.site · github.com/iwfan

ABOUT

I have 10+ years of full-time software development experience across modern web applications and cross-platform product development. My work has spanned product-facing UI, frontend architecture, engineering infrastructure, and complex business workflows, with a focus on building maintainable systems that scale with both product scope and team size.

- Strong in architecture design, performance optimization, and turning complex product requirements into reliable, maintainable implementations.
- Consistently focused on code quality, meaningful testing, and engineering practices that improve long-term maintainability.
- Prefer a terminal-first, mouseless development workflow, and feel most productive with tools like Neovim and Lazygit.
- Work effectively across product, design, and engineering teams, and keep delivery quality high in fast-moving environments.

EXPERIENCE

Front-end Engineer

Sep 2024 — Apr 2026

Web3 Exchange

Worked on both Dex Wallet App and Telegram Wallet Mini App across Flutter and React / Next.js. Owned the contract trading module end to end, integrated multiple trading platforms, and improved transaction flow reliability, interaction quality, and client-side maintainability for on-chain trading scenarios.

Flutter · Dart · Riverpod · React · Next.js · Telegram WebApp

---

Front-end Engineer

Jun 2021 — Aug 2024

Jinshuju

Led and delivered several core products including AI Examination, Portal, and the editor/data page rebuild. Drove frontend architecture, permission system design, reusable form abstractions, and product incubation from 0 to 1, while helping improve team delivery quality, maintainability, and development efficiency.

React · Next.js · Redux · GraphQL · Vitest · AG-Grid

Front-end Engineer

Mar 2019 — Jun 2021

ThoughtWorks

Built core capabilities for a large-scale micro-frontend transformation and Widget SDK projects, including app registration and loading, style isolation, cross-app communication, and SDK communication protocols. Also contributed to delivery standards, framework consistency, testing, and developer documentation across multiple teams.

TypeScript · Angular · Single-Spa · Qiankun · Jest · Cypress

Java Developer

Jun 2016 — Mar 2019

BNC Technologies

Owned delivery of device management capabilities in the GiNMS project and led the introduction of Vue + iView to modernize frontend development. Helped complete frontend-backend separation, improved documentation workflows, and significantly increased overall development efficiency.

`Vue` `iView` `Webpack` `Java` `Spring` `MySQL`

SELECTED PROJECTS

Mind Guards

→ mind-guards.com

An online knowledge project about logical fallacies and cognitive biases, designed to help readers recognize flawed reasoning and build stronger critical thinking habits.

Raycast Quick Search

→ Raycast Store

A Raycast extension that searches selected text or clipboard content through global shortcuts. It was featured by Raycast officially and has reached 3K+ installs in the Raycast Store.

Chore-CLI

→ GitHub

A TypeScript + Node.js CLI for scaffolding frontend projects and infrastructure. It was featured in Tech Enthusiasts Weekly and has received 100+ GitHub stars.

SKILLS

FRAMEWORKS

- React / Next.js
- Astro / Hono
- Vue / Vite
- Redux / React Query
- Flutter

TESTING

- Jest
- Vitest
- Cypress
- React Testing Library
- Integration Testing

ENGINEERING

- TypeScript
- GraphQL
- Webpack
- Tailwind CSS
- Node.js

DEVOPS

- Docker
- GitHub Actions
- GitLab CI
- Jenkins
- Cloudflare / Sentry

EDUCATION

Applied Electronic Technology

Sep 2013 — Jun 2016

Taiyuan University · Department of Computer Engineering
